Principles of Meteorology in the context of SAR operations

31 December – 4 January 2024, Benghazi, Libya

1. Context

The International Organization for Migration (IOM) works in close partnership with Libyan authorities to enhance their capacity to respond to the challenges related to migration management. IOM takes up the role of promoting the orderly and humane management of migration, promoting international cooperation on migration issues, supporting relevant actors to govern migration flows and effectively maximize their positive impacts while minimizing the potential costs on migrants and society, as well as providing humanitarian assistance to migrants in need.

Thousands of migrants each year continue to make the treacherous trip across the Mediterranean, a journey that has continued to claim the lives of many migrants.

Maritime emergencies present unique challenges that require specialized skills and knowledge. Search and rescue training at sea prepares responders to handle these challenges, such as navigating rough waters, dealing with extreme weather conditions, and using specialized equipment.

In the context of search and rescue operations, it is imperative to account for meteorological conditions and carefully evaluate their influence. Given the significant impact of these factors, appropriate training is critical to ensure that personnel are adequately prepared to navigate the challenges posed by adverse weather conditions.

Against this background, IOM Libya proposes a five-day training on the Principles of Meteorology in the context of SAR operations.

2. Objectives of the training

Upon the completion of the training, officers will acquire in-depth knowledge of aerial and atmospheric elements, as well as an understanding of the factors that influence temperature. This knowledge will enable them to conduct SAR operations in a more efficient and safe manner, thereby contributing to the overall success of the mission.

3. Topics

The training will cover the following topics:

- Aerial elements
- Atmospheric components
- Weather forecasters
- Atmospheric pressure and measuring devices.
- Wind & Equipment
- Factors affecting temperature.

4. Methodology

The training will consist of interactive sessions, case studies and practical exercises. A pre/post-training evaluation will be conducted to provide feedback on the knowledge gained, quality of delivery, overall organization, and logistics of the training. The training has been designed to encourage active participation. During the practical part of training, participants will be mixed and split for the discussions, while the plenary sessions will be organized and moderated by the trainer. Participants will also be asked to contribute to the training by sharing their national best practices, latest developments, views, and insights.

1. Targeted participants:

Ministry of Interior:

- General Administration for Coastal Security (GACS) – Twenty (20) officers involved in search and rescue operations.

5. Dates, location and venue

Ministry of Foreign Affairs
and International Cooperation

The five-day training will be held in Benghazi from 31 December 2023 – 4 January 2024. The agenda and the exact location will be communicated to all the participants at a later stage.
